## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Suhara et al. (US 5,953,204).

Suhara et al. disclose in fig. 1, an electric double layer capacitor comprising two plate-like polarizable electrodes (1, 1) stacked in layers via a separator (8), the electric double layer capacitor being constituted by housing the electrodes and separator in an outer packaging lid (3) and an outer packaging case, the outer packaging lid having an upper portion and a lower portion with a diameter defined larger than that of the upper portion, wherein a contact area between a first polarizable electrode arranged above in the outer packaging lid and the outer packaging case and the separator is different from a contact area between a second polarizable electrode arranged lower than the first

Art Unit: 2831

polarizable electrode and the separator, and the first polarizable electrode is thicker than the second polarizable electrode.

***Allowable Subject Matter***

3. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest (taken in combination with the other claimed features) an electric double layer capacitor wherein the first polarizable electrode and the second polarizable electrode having a generally equal volume (claims 2, 4).

The prior art does not teach or suggest (taken in combination with the other claimed features) an electric double layer capacitor wherein the contact area between the first polarizable electrode and the separator and the contact area between the second polarizable electrode and the separator have a relative ration of 10:8 to 10:5 (claim 3).

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 6,275,371 – electrode material for an electrochemical capacitor.

US 5,953,204 – electric double layer capacitor.

Art Unit: 2831

US 5,428,501 – solid electrolyte capacitor
